

OAKWOOD HOSPITAL

Background

Market:	Hospitals
Location:	Detroit, Michigan
Customer:	Temperature Engineering
Project:	Oakwood Hospital

Solution

The Oakwood Hospital project consisted of two custom air handlers with a common vestibule to form a penthouse style unit. TMI frequently builds units similar in nature. Our ability to supply units with common vestibules, mechanical control rooms and integrated storage rooms has led many health-care clients such as Oakwood Hospital to choose TMI as their custom air system supplier.

These units delivered 50,000 cfm of indirect fired heating and DX cooling complete with clean steam humidifiers to maintain the desired conditions. TMI continues to provide needed value to the health-care industry in America.

Benefit

Newmatic Engineering is combining its many years of engineering and mechanical systems knowledge, expertise and service with TMI to offer reliable, high quality, American-made custom air handlers.
